

ThetaTrap

A bounded MCP-native AI options agent

Qwen investigates earnings risk and calls Alpaca's official MCP tools. Deterministic policy keeps every paper order inside fixed limits.

PAPER TRADING / BASIC INDICATIVE DATA

The thesis was simple. Safe autonomy was not.

**A YouTube lesson made me ask:
can an agent collect elevated
earnings premium without betting
on direction?**

The hard part was not drawing an iron condor. It was proving the event, liquidity, order state, and exit were safe after timeouts and restarts.

01	Verify	Use first-party earnings timing and require listed expirations.
02	Structure	Sell near-term premium with farther-out wings that cap loss.
03	Decide	Let Qwen inspect evidence and approve or veto the candidate.
04	Exit	Reconcile through Alpaca MCP and target a next-morning close.

The LLM makes the judgment; policy signs the order.

Hard boundary: Qwen cannot change the symbol, strikes, quantity, loss cap, account, or authorization date.

Autonomy stops where deterministic risk begins.

Every entry must pass account identity, market schedule, event, data quality, liquidity, pricing, one-shot authorization and broker-flat gates.

\$500

Maximum loss

Also capped at 0.5% of account equity.

1

Contract

One position at a time; no overlapping exposure.

1

Submission / date

A broker submission consumes that day's authorization.

A live, read-only trail from agent state to account equity.

ThetaTrap paper-trading evidence

Public read-only dashboard · no broker controls · no Alpaca or Featherless credentials

Build 29wdc8a7FeK7

PAPER · TRADING DISARMED · new broker entries are blocked

Alpaca Basic indicative option quotes · paper fills are simulated and are not live-profit evidence

> MCP evidence

Strategy and deterministic candidate

State	Date	Symbol	Eligible
NOT_STARTED	none	none	NO

No deterministic gate result has been published yet.

Qwen decision and bounded tool trace

Model	Status	Decision	Error
not run	not run	none	none

No redacted Qwen tool trace has been published yet.

191

AUTOMATED TESTS

Integrated release and isolation checks.

\$100K

PAPER BASELINE

Flat account; zero orders on Aug 31.

READY

MCP + WORKER

Read-only smoke passed on the Droplet.

Baseline evidence only — final equity and P&L remain broker-reconciled paper results, never replay output.

Next: better evidence, with the same hard boundaries.

ThetaTrap's goal is not unconstrained intelligence. It is accountable autonomy.
